

## CSC2302

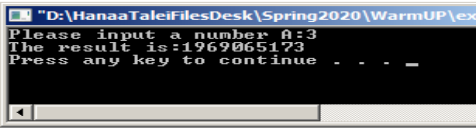

### Review Session 1

### Functions and Pointers

#### Exercise 1

The following code results in garbage output! Find out why?

```
1 #include<stdio.h>
2
3 int function(int) ;
4
5 main() {
6     int A,square;
7
8     printf("Please input a number A:");
9     scanf ("%d",&A) ;
10
11     function(A) ;
12
13     printf("The result is:%d\n",square);
14 }
15
16 int function(int N) {
17     return (N*N) ;
18 }
```

#### Exercise 2

This is a code I am trying to use to draw a square of stars but didn't work for me!  
Re-write the code using your computers and try to fix the errors generated during compilation.

```
1 #include<stdio.h>
2 void draw_square(int) ;
3 main(){
4     int side;
5
6     printf("Please input the side of the square:");
7     scanf ("%d",&side) ;
8
9     void draw_square(side) ;
10 }
11 void draw_square(int s) {
12
13     for(i=0;i<side;i++)
14     {
15         for(j=0;j<side;j++)
16             printf("* ");
17         printf("\n");
18     }
19 }
```

### **Exercise 3**

We want to use a function that computes the new price of an article after applying a reduction rate. Your execution should look like this:

Input the item price: 1500

Input the reduction rate: 25

The new price is: 1125

### **Exercise 4**

Assume I have two grades in the main function called gr1 and gr2. We want to define a function that adds some bonus points to the two grades. A student got 2 pts extra for the first grade and 5pts for the second grade. Please print the old and the new values of gr1 and gr2 in the main function.

### **Exercise 5**

In this exercise, we will use two functions:

From\_Num\_to\_Letter(): a function that returns the correspondent grade letter (A,B,C,D,F or I (invalid)) for a particular grade.

Find\_highest\_lowest\_avg(): a function that takes as input 3 grades then produce 3 output:

- The highest grade
- The lowest grade
- The average grade

We would like to use From\_Num\_to\_Letter() to check what grade letter that corresponds to my grades average.

Your execution should look like this:

Input three grades: 78 45 69.5

Highest:78

Lowest: 45

Average:64.17 which is a D grade
