

CSC2302 Review Session 4: Structures and Files

In this practical session you need to:

1. Work with a structure called Host_info which consists of two members: an IP address and a Host name
2. You need to work with an array to hold the data of every device connected to the network
3. You provide the user with the following menu to choose from:
 - a. Load data in the file to the array
 - b. A new device connect to the network
 - c. A device disconnected from the network
 - d. View pair of devices connected to the same network
 - e. Update the file with the new list
 - f. Quit
4. Every option in the menu should be implemented using a user defined function
